

Environmental Policy

Metamark's goal is to reduce its environmental footprint as far as it practically can. So we work with sustainable raw materials wherever possible, we conserve energy and we recycle. The environment is our responsibility and we take it seriously.

We apply energy saving measures to all areas of our business and work with proven and sustainable raw materials wherever we can. Our manufacturing employs state of the art technology which allows us to maximise the yield from every resource we consume and to operate with class leading efficiency.

Metamark produces little waste that can't be usefully recycled. So we don't contribute to the growing landfill problem - we help solve it as our waste is turned into useful second-life products.

Where plasticisers are a necessary component of the product, Metamark uses only the highest grade plasticisers to minimise the impact on the environment.
