

The products in the Digital range have been specifically developed for Solvent and Eco Solvent Plus Inkjet printing and Metamark has a wide range of Speciality Digital Vinyl products including Reflective, Polish and Etch Vinyl. We do not recommend printing on our Sign Vinyl products. A couple of common examples are shown below:

Brushed Aluminium: This product has a clear top coat film in its construction. This film can delaminate with the heat from a Solvent printer.

Coloured Sign Vinyls: While it can be possible to achieve good results printing onto coloured Sign Vinyl ranges, such as Metamark 4 Series and 7 Series, it can often be the case that the colour reproduction is poor as solvent inks are generally not sufficiently opaque.
